1. What is Kennametal known for?
Kennametal is known for engineered wear-resistant solutions, tooling, and materials designed for demanding industrial, construction, mining, and roadwork applications.

2. What Kennametal products does DCS Techno Services offer?
DCS Techno Services provides Kennametal solutions for applications involving demanding wear conditions, including road rehabilitation and other industrial applications.

3. What is Kennametal KenCast?
KenCast is a composite wear material that combines Kennametal cemented tungsten carbide with air-hardened steel to provide high wear resistance and toughness.

4. Where are Kennametal KenCast parts used?
KenCast parts can be used on reclamation equipment, road planing equipment, and trenching equipment, including applications such as pedestal protectors, kicker plates, drag shoes, and base protection.

5. Why choose Kennametal wear-resistant solutions?
Kennametal wear solutions are designed to withstand abrasive operating conditions and help protect equipment components from excessive wear. KenCast is also described as more wear resistant than standard or abrasion-resistant steels.

6. Are Kennametal solutions suitable for road rehabilitation equipment?
Yes. Kennametal KenCast components are specifically used for road rehabilitation applications, including road planing and reclamation equipment

7. What are the benefits of KenCast compared with conventional wear materials?
KenCast combines carbide wear resistance with the toughness of air-hardened steel. It is designed to provide greater wear resistance while being easier to apply than some conventional carbide and hardfacing solutions.

8. Can Kennametal solutions help protect construction equipment?
Yes. Wear-resistant Kennametal components can help protect equipment operating in abrasive environments, potentially reducing component wear and helping extend service life.

9. How can I select the right Kennametal solution for my application?
The appropriate solution depends on the equipment, operating conditions, material being processed, and type of wear involved. DCS Techno Services can help identify a suitable Kennametal solution based on your application requirements.

10. How can I enquire about Kennametal products from DCS Techno Services?
You can contact DCS Techno Services with your equipment details and application requirements to discuss the appropriate Kennametal product or wear solution for your project.
